# Lamar Jambi

719-354-8156 | play.lmjambi@gmail.com | LinkedIn | GitHub | Portfolio | itch.io

## Education

**New York University** — New York City, NY
*Bachelor of Science in Integrated Design & Media (Game Development Concentration)* — *May 2027*
**Honors:** Dean's List (Fall 2025, Spring 2026)
**Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Deep Learning, Creative Coding, Programming for Games, 3D in AR
**Activities:** Martin Scorsese Virtual Production, XR Research, NYU UX Club, Tech Assistant in IDM, Robotics Club, Tandon Student Council

## Experience

**Programming Intern** — Mar 2026 – Present
*DragonJar Studios* | *Video game startup studio* — *New York City, NY*
- Engineering **5+** responsive player movement systems in Unreal Engine 5 in C++ and Blueprints
- Building physics-based puzzle systems (e.g., weight-sensitive pressure plates); using C++ interfaces and actor states
- Designing NPC behavior systems using Behavior Trees (dialogue, combat); implementing UE5 AI Navigation

**Gameplay Designer** — Oct 2025 – Present
*Real Eaters Club* | Gamejam group, **5-person** indie team — *New York City, NY*
- Developing core gameplay systems (inventory, player progression) in Unity, Unreal Engine, and Godot
- Iterating on algorithms for AI navigation and game logic; improving CPU efficiency by **30%**
- Designing and building **50+** UI assets (main menus, inventory interfaces); creating responsive layouts

**Game Development Fellow** — May 2026 – Aug 2026
*Girls Make Games* | *Game Development Institute* — *San Mateo, CA*
- Guided a team of **5+** developers in Construct 3; managed project scope to deliver a publishable game in **1 month**
- Led technical troubleshooting; debugged **10+** core gameplay mechanics (puzzle logic, enemy AI)
- Backed women's representation in games; trained an all-female cohort in industry-standard tech practices

**Research Intern** — Nov 2024 – Feb 2025
*Game Innovation Lab* | *AI in Games Research Lab* — *New York City, NY*
- Analyzed **5+** AI algorithms including A* Search; evaluated trade-offs in speed and memory usage for game logic
- Trained AI agents on puzzle-solving tasks; evaluated generative performance across PuzzleScript
- Reimplemented game engines in C++ and Python; analyzed performance and computational cost

## Projects

**Dance, Dance, Die: 3D Rhythm Horror Game** | *Unreal Engine 5, C++, Blueprints, MetaSounds, Diversion* — Present
- Developed spline-based rhythm gameplay; misses escalate into flickering lights, jittery notes, and a jumpscare
- Built a custom Python note-charting tool; RhythmChart maps notes to song timings for import into UE5

**Cosmic Thread: 2D Puzzle Game** | *Unity, C#, LineRenderer, Git* — Present
- Coded an interactive evidence board that links UI visual nodes dynamically using the LineRenderer component
- Built validation checks and game logic structures to verify correct solutions before advancing levels

**Expelled: 3D Isometric Combat Game** | *Unity, C#, URP, NavMesh, Git* — May 2026
- Collaborated in a 2-person team to program combat mechanics and an FSM for enemy AI behaviors
- Implemented Unity NavMesh and Cinemachine to handle real-time isometric and first-person camera perspective switches

**Requiem Forest: 3D Horror Game** | *Unreal Engine 5, C++, Blender, Perforce, Diversion* — Oct 2025
- Worked with a small team during a game jam to build the player inventory, flashlight, and UI in C++
- Set up the interactive script handling **20+** custom dialogue text triggers across playtests

## Skills

**Programming Languages**: C#, C/C++, Python, Java, TypeScript, JavaScript, HTML5, CSS3
**Game Engines**: Unity, Unreal Engine 5/4, GameMaker, Godot, Construct 3, PICO-8
**Developer Tools**: Git, Perforce, Diversion, Jira, Docker, CoreLink, Google Cloud Platform
**Frameworks**: React, Next.js, WordPress, Material-UI, p5.js
**Digital Art & Design**: Adobe Creative Cloud, Blender, Maya, Aseprite, Procreate, Figma
**Spoken Languages**: English (Fluent), Arabic (Native)
