EDUCATION

New York University <i>Bachelor of Science in Integrated Design & Media (Game Development Concentration)</i>	New York City, NY May 2027
Honors: Dean's List (Fall 2025, Spring 2026)	
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Deep Learning, Creative Coding, Programming for Games, 3D in AR	
Activities: Martin Scorsese Virtual Production, XR Research, NYU UX Club, Tech Assistant in IDM, Robotics Club, Tandon Student Council	

EXPERIENCE

Programming Intern <i>Dragonjar Studios (Video game startup studio)</i>	Mar 2026 – Present New York City, NY
- Engineering 5+ responsive player movement systems in Unreal Engine 5 using C++ and Blueprints - Building physics-based puzzle systems (e.g., weight-sensitive pressure plates); utilizing C++ interfaces and actor states - Designing NPC behavior systems using Behavior Trees (dialogue, combat); implementing UE5 AI Navigation	
Gameplay Designer <i>Real Eaters Club Gamejam group, 5-person indie team</i>	Oct 2025 – Present New York City, NY
- Developing core gameplay systems (inventory, player progression) in Unity, Unreal Engine, and Godot - Iterating on algorithms for AI navigation and game logic; improving CPU efficiency by 30% - Designing and building 50+ UI assets (main menus, inventory interfaces); creating responsive layouts	
Research Intern <i>Game Innovation Lab AI in Games Research Lab</i>	Nov 2024 – Feb 2025 New York City, NY
- Analyzed 5+ AI algorithms including A* Search; evaluated trade-offs in speed and memory usage for game logic - Trained AI agents on puzzle-solving tasks; evaluated generative performance across PuzzleScript - Reimplemented game engines in C++ and Python; analyzed performance and computational cost	
Game Development Fellow <i>Girls Make Games Game Development Institute</i>	Apr 2026 - Present San Mateo, CA
- Guiding a team of 5+ developers in Construct 3; managing project scope to deliver a publishable game in 1 month - Leading technical troubleshooting; debugging core 10+ gameplay mechanics (puzzle logic, enemy AI) - Backing women's representation in games; training an all-female cohort in industry-standard tech practices	

PROJECTS

Cosmic Thread: 2D Puzzle Game <i>Unity, C#, LineRenderer, Git</i>	Present
- Programming a state-driven investigation board (dynamic node-to-node line rendering) - Engineering sequence-gated tutorial logic and data structures to validate multi-level puzzle solutions	
Expelled: 3D Isometric Combat Game <i>Unity, C#, URP, NavMesh, Git</i>	May 2026
- Programmed enemy AI pathfinding using Unity NavMesh and a Finite State Machine (FSM) for core combat states - Engineered responsive game feel thru camera systems, dynamic UI, and URP silhouette rendering	
Fog City Shadows: 2.5D Horror Narrative Game <i>Unity Engine, C#, Procreate, Blender</i>	Mar 2026
- Engineered player controller, AI navigation, stress/panic mechanics, and full UI/HUD systems - Designed multi-scene horror environments through lighting, fog, asset curation, and audio through multiple levels	
Requiem Forest: 3D Horror Game <i>Unreal Engine 5, C++, Blender, Perforce, Diversion</i>	Oct 2025
- Collaborated in a game jam to develop 4+ core gameplay systems (inventory, flashlight, puzzle logic, and UI) - Integrated narrative system with 20+ dialogue triggers; validated through playtest sessions	

SKILLS

Programming Languages: C#, C/C++, Python, Java, TypeScript, JavaScript, HTML5, CSS3
Game Engines: Unity, Unreal Engine 5/4, GameMaker, Godot, Construct 3, PICO-8
Developer Tools: Git, Perforce, Diversion, Jira, Docker, CoreLink, Cursor, Google Cloud Platform
Frameworks: React, Next.js, WordPress, Material-UI, p5.js
Digital Art & Design: Adobe Creative Cloud, Blender, Maya, Aseprite, Procreate, Figma
Spoken Languages: English (Fluent), Arabic (Native)
